* **Outline**

- *What is rehabilitation
- *Types of rehabilitation
- *Rehab nursing skills include
- *Conditions treated
- *Nurses' role in rehabilitation
- *Work place settings
- * *Rehabilitation centers*

*Objectives

*Purpose

*The purpose of rehabilitation is to restore some or all of the patient's physical, sensory, and mental capabilities that were lost due to injury, illness, or disease..

*introduction

*Rehabilitation is the process of helping an individual achieve the highest level of independence and quality of life possible.

*What is
rehabilitation?

- * Back and neck
- * Hand
- * Hip and Knee
- * Multi-trauma
- * Musculoskeletal/Orthopedic
- * Sports Injuries
- * Work Injuries

*Types of rehabilitation

- * Treating changes in the functional ability and lifestyle of people dealing with injury, disability, and chronic illness
- * Educating patients and helping them with adjustments that support their health
- * Supporting adaptive capabilities
- * Providing holistic, comprehensive, and compassionate end-of-life care for patients with life-limiting conditions

*** Rehab nursing skills include:**

- * Case management
- * Community health
- * Consultant
- * Nurse clinician
- * Nurse educator
- * Rehabilitation admissions liaison nurse
- * Researcher

*** Rehab nurses may be identified by other specializations and roles that include:**

- * The nurses' role in rehabilitation was the overarching theme to emerge from the research. The concepts of enablement and maintaining independence were seen as extremely important and participants were aware of the need to encourage residents to do things for themselves.
- * Some participants were aware of the range of skills, knowledge, expertise and competencies needed for the rehabilitation of older people, while others considered that it did not require any particular skills because rehabilitation was an intrinsic part of nursing older people.

* Nurses' role in rehabilitation

* Nurses

Nurses who deal with rehabilitation patients are trained to take care of the everyday need of the patients. Often after severe brain or physical injury a person may find it difficult to take care of oneself, so these nurses are trained to take care of patients.
