

RESPIRATORY SYSTEM

Respiratory system

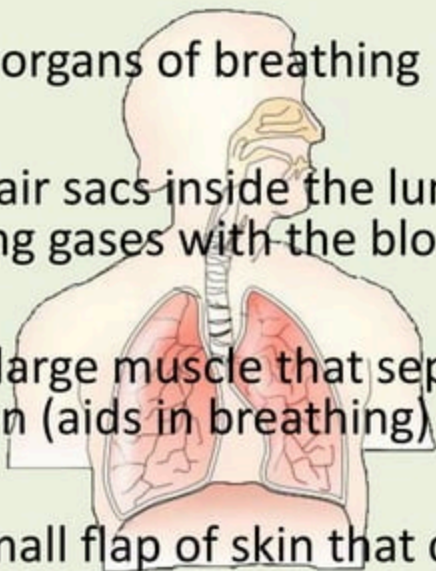

Changes gases in order for the body to work Properly

BREATHING:

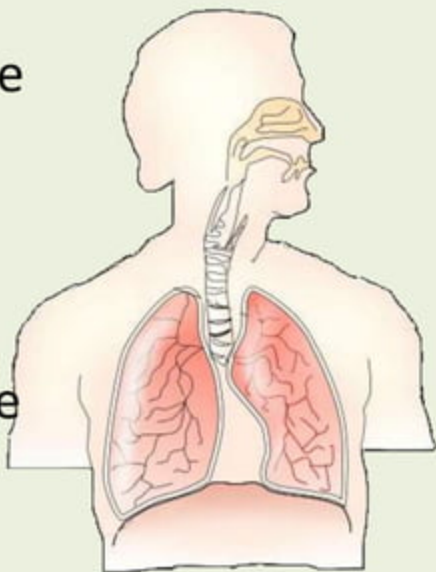

Respiratory system

- Lungs – main organs of breathing
- Alveoli – tiny air sacs inside the lungs that do the work of trading gases with the blood
- Diaphragm – large muscle that separates chest from abdomen (aids in breathing)
- Epiglottis – small flap of skin that covers trachea to keep food out

Care of the Respiratory system

- Do not smoke
- Exercise
- Good posture

Disorders of the Respiratory system

- Asthma – condition in which the bronchi swell and close up
- Bronchitis – swelling of the bronchi
- Emphysema – severe disease of the alveoli
- Pneumonia – infection of the lungs
